

DB-25 Solderless Jumper Box **Model 232SMFJB**

The 232SMFJB is a small, reusable RS-232 adapter that is designed to allow quick and easy connections between two RS-232 devices. This adapter utilizes a special jumper wire and socket system that is easily changeable and does away with the need for crimping connectors and soldering wires. The sockets within the 232SMFJB are internally gold plated for low contact resistance and are covered with a thin membrane of silicone rubber to seal out dust and moisture. This unit has one DB-25M and one DB-25F connector each having a group of sockets associated with it, as well as ten unconnected sockets which can be used for bussing connections together.

The 232SMFJB comes complete with connector mounting hardware, cut and stripped jumper wires, an RS-232 signal chart, instructions to assist in making connections, and a one year warranty.
